

Shuo Han

Email: shuhan2024.1@u.northwestern.edu | Address: Evanston, IL

Education Background

Northwestern University	2022.09 – 2024.08
• Master of Science in Statistics and Data Science	
Boston University	2019.09 – 2022.08
• Bachelor of Arts in Computer Science and Statistics	
• Awards: Dean's List	

Research Interests

Trustworthiness, security, reasoning, and domain-specific applications of Large Language Models (LLMs), with a focus on addressing reliability and security concerns.

Research Experiences

Research in Trustworthy LLMs

University of New South Wales	2024.05 – Present
• Design experiments to test the robustness and uncertainty of LLM responses for cybersecurity tasks.	

Research in AI for Security

Northwestern University	2023.12 – 2024.05
Project Background: Toxicity detection in human-LLM interactions often relies on single-annotator labels that can be biased, so we aim to use crowdsourced labels for more balanced and accurate assessments.	
• Crafted toxic prompts using prompt engineering techniques and annotated them through third-party companies and LLMs. Integrate these crowdsourced annotations using a soft-labeling technique.	

Research in Data Mining

Northwestern University	2023.07-2024.08
Project Background: The sparsity of U.S. hydrological data impedes effective assessment. To overcome this challenge, we explored using graph neural networks to impute missing data through spatiotemporal dependencies.	
• Designed the model to capture upstream-downstream information among all monitoring stations, rather than relying solely on general latitude and longitude data, to better suit hydrological data.	

Research in AI Security

- Explored applying model compression techniques to enhance the model structure, achieving lower computational costs and improved accuracy for Generative Adversarial Networks.
- Proposed a data collection method for the industrial internet that includes network traffic and industrial control features, enhancing the accuracy of botnet detection.
- Applied a Logistic Regression approach for botnet detection on the collected dataset, addressing both binary classification and multiclassification tasks.

Academic Services

Graduate Teaching Assistant

Northwestern University

Primary responsibilities: Host office hours, grade assignments, and lead project presentation sessions.

- STAT 332-0/IBIS 432, Spring 2023, Class size:30
- STAT 303-2, Winter 2023, Class size: 100

Volunteer

- The Seventeenth International Conference on Web Search and Data Mining, 2024

Skills

- Languages: Mandarin (native), English, Korean Beginner, Japanese Beginner
- Software: Adobe Illustrator, MS OFFICE
- Programming language: Python, Java, C, R, SQL, CSS, HTML, Java Script, OCaml
- Framework/Technology: Pytorch, Tensorflow, Linux, Git, HuggingFace, Pandas, Numpy, Matplotlib
